

National Physician Services Releases New Healthcare Cloud Services Suite

Hartford, CT, March XX, 2015 — [National Physician Services](#), a national healthcare information technology company that delivers a comprehensive group of state-of-the-art enterprise technology services for physicians to optimize their workflows, announced today the release of its NPS Healthcare Cloud Services Suite. This suite of products is a HIPAA-compliant offering that provides security, compliance and flexibility for comprehensive healthcare application hosting, archiving, back-up, disaster recovery, risk assessment and desktop access to cloud-based applications.

Through the Healthcare Cloud Services Suite, NPS designs a hosting environment that fits into the workflow, technology and financial requirements of each practice. Supported by its superior application expertise, NPS allows physician practices to focus on healthcare strategy, business continuity and patient care. With its HIPAA Security Risk Analysis process, the company's certified and insured service providers can drive the process with each physician staff and deliver most on-site risk analyses on short notice. In addition to its cloud hosting services, NPS offers Perfect Practice Consulting, application and integration support and managed healthcare IT and technical support services.

“Switching to the NPS Healthcare Cloud Hosting Services can not only save physician practices a significant amount in cost, it also reduces resource commitments and security risks,” remarked Bryan Graven, CEO of National Physician Services. “Our comprehensive hosting solution includes planning, set-up, migration, licensing, maintenance, management and back-up of mission-critical EHR and practice management applications and enables you to manage your practice while we manage the technology.”

As a VMware VCloud Air certified provider, NPS delivers advanced hosting capabilities at its world-class data centers with a secure and reliable application hosting environment. Other benefits of the NPS Healthcare Cloud Services Suite include virtual server solutions, disaster recovery and replication services, reduced data center redundancy, automated backup solutions and performance-based service level agreements. Physician practices that utilize the suite enjoy a fixed monthly fee and a reduced capital outlay.

"In early 2014, we made the decision to migrate all our clinical and financial applications to NPS' cloud hosting and disaster recovery solutions," explained Dr. Jarrod Post, CEO of Connecticut Multispecialty Group. "The latest projections have our practice saving 200,000 in data center costs over the next 3 years and an additional 25% in savings through adoption of their disaster recovery services."

Along with two other high-performing healthcare information technology companies, EHR Integration Services and Byte Sized Solutions, NPS is a charter members of a partnership network called the [Perfect Practice Alliance](#) (PPA) whose mission is to help physician practices efficiently and cost-effectively achieve their desired clinical,

technology and business goals. With an emphasis on workflow improvements and bottom-line results, the PPA offers a wide range of opportunities for physician groups to become the Perfect Practice.

About National Physician Services

Founded over ten years ago by progressive and successful practices of independent physicians, National Physician Services (NPS) is a national healthcare information technology services company headquartered in Hartford, CT. The company delivers a comprehensive group of state-of-the-art enterprise technology services across the spectrum of clinical and business information systems with an expertise in Electronic Medical Records, Practice Management and many other applications necessary for physicians to optimize their workflows.
